

Geographic Information Systems
Week-12: Assignment-12

- 1 Who is known as father of GIS?
 - (a) Roger Moore
 - (b) Roger Tomlinson**
 - (c) Roger Federer
 - (d) Roger Bannister

- 2 Which analysis identify cells of a DEM those can be seen from a particular point on the surface?
 - (a) Viewshed
 - (b) Visibility Analysis
 - (c) Line-of-sight analysis
 - (d) All of the above**

- 3 If you are precise, that doesn't necessarily mean you are However, if you are consistently, you are also precise.
 - (a) Accurate, precise
 - (b) Precise, accurate
 - (c) Accurate, accurate**
 - (d) Precise, precise

- 4 A DEM, offset height and direction is required in:
 - (a) Viewshed
 - (b) Visibility Analysis
 - (c) Line-of-sight analysis
 - (d) All of the above**

- 5 Error in GIS:
 - (a) Reduces
 - (b) Eliminates
 - (c) Lessens
 - (d) Propagates**

- 6 In long distance line-of-sight analysis which is important to consider:
 - (a) Digital Surface Model
 - (b) Curvature of the Earth
 - (c) Atmospheric refraction
 - (d) All of the above**

- 7 Which map element is considered part of "Golden Rules of Cartography"?
 - (a) Scale bar
 - (b) Orientation
 - (c) Legend
 - (d) All of the above**

- 8 Computer intensive, requirements of digital datasets and software dependency are associated with GIS.
 - (a) Advantages

- (b) Benefits
- (c) Supports
- (d) None of the above**

9 Reversal of a DEM can be useful to produce:

- (a) Contours**
- (b) Polygons
- (c) Points
- (d) Pixels

10 If points in a map are not uniformly distributed then these points might have:

- (a) Random distribution
- (b) Clustered distribution
- (c) Dispersed distribution
- (d) All of the above**

----- END -----
