

Geographic Information Systems

Week-3: Assignment-3

- 1 In georeferencing, if a user chooses third order polynomial equation, then minimum number of required GCPs required are:
(a) 10
(b) 12
(c) 13
(d) 14
- 2 In Georeferencing the y-scale (E) is, because the origins of an image and a geographic coordinate system are different.:
(a) Positive
(b) Negative
(c) Square root
(d) None of the above
- 3 Relatively Quadtree raster data compression technique provides:
(a) High compression
(b) No compression
(c) Less compression
(d) Maximum compression
- 4 MrSID raster data compression technique can provide compression upto:
(a) 30:1
(b) 40:1
(c) 50:1
(d) 60:1
- 5 During data generalization, number of nodes of a polyline / polygon are:
(a) Increased
(b) No change
(c) Reduced
(d) None of the above
- 6 What does the abbreviation RDBMS stand for?
(a) Digital Base Mapping System
(b) Database Manipulation Software
(c) Data Borrowing and Movement Software
(d) Relational Database Management System
- 7 In which database tables are related by sharing common entity characteristic(s):
(a) Hierarchical
(b) Network
(c) Relational
(d) Object-Oriented
- 8 The advantage of Standard Query Language (SQL) in relation to GIS databases?
(a) It is special
(b) It is simple and easy to understand

- (c) It uses a true-English style of questioning
- (d) It is good at handling geographical concepts**

9 The measurement technique which uses 2D Cartesian mathematics to calculate lengths and areas is called:

- (a) Geographical measurement
- (b) Geodesic measurement
- (c) Geotagging measurement
- (d) Planar**

10 Generally, all area measurements calculated are:

- (a) Planar**
- (b) Geodesic
- (c) Geodetic
- (d) Geographic

----- END -----
