

Geographic Information Systems

Week-5: Assignment-5

- 1 Map overlay operations are based on:
(a) **Boolean Logic**
(b) Deductive
(c) Inductive
(d) All of the above
- 2 The intersection $A \cap B$ of two sets A and B is the set that contains all elements of A that also belong to B:
(a) False
(b) No change
(c) **True**
(d) None of the above
- 3 Which overlay operator has been used in the following figure?

- (a) AND
(b) OR
(c) NOT
(d) **None of the above**
- 4 Which is the raster based overlay operation:
(a) Arithmetic
(b) Relational
(c) Conditional
(d) **All of the above**
- 5 Which is neighborhood operation?
(a) Interpolation functions
(b) Topographic functions
(c) Search functions
(d) **All of the above**
- 6 Evaluation of characteristics of an area surrounding a specific location is known as:
(a) Digitization
(b) **Neighbourhood operations**
(c) Georeferencing
(d) Merging

- 7 In which operation it is necessary to indicate one or more target locations, the neighbourhood considered around each target and the type of function to be executed on the attributes within the neighbourhood:
- (a) Interpolation functions
 - (b) Topographic functions
 - (c) Search functions
 - (d) all of the above**
- 8 The procedure of estimating unknown values at un-sampled sites using known values of existing observations is known as:
- (a) Interpolation functions**
 - (b) Topographic functions
 - (c) Search functions
 - (d) all of the above
- 9 The of a surface can be represented in a digital elevation model (DEM):
- (a) Photography
 - (b) Petrography
 - (c) Topography**
 - (d) Topology
- 10 Spatial searching based on certain criteria/condition is known as:
- (a) Buffer analysis**
 - (b) Safer analysis
 - (c) Suffer analysis
 - (d) Offer analysis

----- END -----
