

Geographic Information Systems

Week-7: Assignment-7

- 1 Which database model is logically represented by an upside down tree?
(a) Hierarchical
(b) Relational
(c) Network
(d) Object-oriented
- 2 In which database model tables are related by sharing common entity characteristic:
(a) Hierarchical
(b) Relational
(c) Network
(d) Object-oriented
- 3 A cell is assigned the value if there is either no information or insufficient information about the characteristics of the location it represents:
(a) Zero
(b) Meta data
(c) Some data
(d) NoData
- 4 Initially SRTM-DEM has voids which were filled with:
(a) NoData
(b) Zero
(c) Meta data
(d) Some data
- 5 A way to flatten a globe's surface into a plane in order to make a map:
(a) Map enlargement
(b) Map reduction
(c) Map production
(d) Map projection
- 6 Maps are models of:
(a) Virtually
(b) Reality
(c) Rituality
(d) Potentiality
- 7 Map projections involve distortions in:
(a) Shape
(b) Size
(c) Distance
(d) All of the above
- 8 Following is a type of map projection:
(a) Cylindrical
(b) Conic
(c) Azimuthal

(d) All of the above

- 9 Which projection preserves right angles between lines of latitude and longitude and are primarily used because they preserve direction:

(a) Cylindrical

(b) Conic

(c) Azimuthal

(d) All of the above

- 10 The UTM map projection system consists of zones, each 6-degrees of longitude in width:

(a) 50

(b) 60

(c) 70

(d) 80

----- END -----
